

que

Control without compromise

The most advanced integrated
home air conditioning control platform yet.

ActronAir

Meet the family.

The world is constantly evolving, and we need to evolve with it. Why should controlling your comfort be any different? QUE is the most advanced integrated home air conditioning control platform yet. QUE's high quality components, sleek modern design, and easy to use interface brings home air conditioning controls into the 21st century.

However, at ActronAir we believe that it's not enough to simply dress up the same old features with a nice new design. That's why QUE is so much more than just a pretty face.

It's also a control platform packed full of innovations and features, a platform that will evolve with you and continue to adapt and grow long into the future.

One control platform.
So many control options.

The brains of the system

The QUE Touch Master Controller allows you to control your entire system, from individual zones through to the dashboard diagnostics, providing access to every feature that QUE comes with. And it looks great while doing it.

QUE TOUCH
Master Controller

- Colour touch screen
- Wi-Fi connectivity
- Full system control
- Control up to 8 zones
- Dashboard
- System status
- Light sensor
- Proximity sensor
- Humidity sensor
- Temperature sensor
- Away mode
- Quiet mode
- Technical settings
- Password lock
- 7 day scheduler
- Master timer
- Over The Air (OTA) updates
- Optional second controller

Get in the zone

The QUE Zone Controller provides you the ultimate in zone control, allowing you to control the temperature and turn the zone (or even the whole system) on or off from inside the zone itself. It also ensures the zone automatically provides the precise air required to meet your specific comfort needs, saving you energy while providing you the ultimate comfort.

QUE ZONE
Zone Controller

- Reversible graphical display background
- Individual zone control
- Battery or wired power
- Wireless communication
- Zone ON/OFF
- System ON/OFF
- Individual zone timer
- System mode
- System fan speed

Precise temperature control

The QUE Sense Remote Sensor delivers the same precise comfort as the QUE Zone Controller, with the only difference being that it has to be controlled from the QUE Touch Master Controller or QUE Connect Mobile App. The QUE Sense is ideal for kids' bedrooms and playrooms, where you'd rather not let the little fingers do the controlling.

QUE SENSE
Remote Sensor

- Individual zone temperature control
- Battery or wired power
- Wireless communication
- Can be used as secondary sensor in large spaces to maintain precise temperature control

QUE CONNECT
Mobile App

To learn more about the ways QUE gives you complete connectivity, see **page 16** for information on how you can control your system via the QUE Connect Mobile App on your smart device.

Modern design. Classic good looks.

Air conditioning controllers are very visible products, usually installed in full view of the household. We believe that a control should be something you are proud to display, not something you would prefer to hide.

That's why QUE features a beautiful, timeless design that has been specifically developed to match well with a variety of wall colours and textures. Using noble materials like anodized aluminium and brushed stainless steel, it also feels as good as it looks. And with your choice of black or white, you can mix and match to suit every décor.

QUE system available in black or white.

Smarty pants.

Who says a smart device can only be a phone or tablet?

QUE has brought the high standards found in today's smart mobile devices to the world of air conditioning.

With a beautifully designed Graphical User Interface that is intuitive to use and easy to navigate, the QUE Touch Master Controller comes with the highest resolution display available in any home air conditioning control system in Australia. In fact, its 5.7", 1080x720 pixel, full colour touch screen is comparable to the latest in smart phone technology, delivering crisp and clear visuals.

And thanks to its powerful dual core processor with 1GB RAM, QUE also delivers lightning fast performance, with its smart logic allowing it to automatically adjust to deliver the best comfort with the minimum of energy. In fact, QUE is so smart that it varies the brightness of the QUE Touch Master Controller's screen depending on its environment – for example, if bright sunlight is coming through the window it will adjust to ensure you can always see it with ease.

And to stay current, QUE allows you to receive updates over the air to ensure you it is always up to date with the latest software.

When it comes to zoning, it's your choice.

Zoning is a commonly used term in air conditioning, but it rarely means the same thing. The reality is that different brands deliver zoning in different ways, with varying degrees of comfort and efficiency. And usually with those other brands, once you've made your choice, that's it. If you have different zoning needs in different rooms, or if your individual zone requirements evolve over time, it is very hard to update.

Well, with QUE we believe that zoning should be flexible enough to suit how you use your house – now, and into the future. So we designed it to ensure that you could pick and choose what type of zoning works for you in each zone of your house.

For example, to ensure your zones come with precise temperature control you can simply use the QUE Sense Remote Sensors. These ensure that the desired temperature is accurately maintained within the zone, and are easily controlled from the QUE Touch Master Controller or QUE Connect App.

However, if your house has a spare room that isn't often used, it may not require precise temperature control. QUE allows you to simply match the temperature in that room to the settings of any other zone that has either a QUE Sense or QUE Touch installed.* This means the temperature in the spare room will be maintained as per the settings of the selected zone, though not with the precision that comes from having its own QUE Sense.

For those zones where you desire a higher level of control, you can opt to install QUE Zone Controllers. These easily allow you to turn the zone on and off from within the room, change the temperature, or even turn the whole system on or off.

*When matching a room without a sensor to a zone that uses a QUE Sense Remote Sensor, this removes the ability for individual temperature control in either space. Instead, the QUE Sense will now use the set point from the QUE Touch Master Controller.

Life is wireless. Now your controls can be too.

With QUE, you can now connect your QUE Zone Controller and QUE Sense Remote Sensor wirelessly.

This allows for a simple installation that minimises intrusions on your house, and can save time and money. And because QUE can go where wires can't, you will love the flexibility regarding installation locations.

It also means you can change your arrangements as your needs change. For example, if you require additional control in a specific area, it's very easy to swap out the QUE Sense with a QUE Zone. You can simply select the options that make the most sense for you, when you need it.

Individual comfort control, built in.

If you want the ability to have different temperatures in different rooms at the same time, we've got good news. QUE comes with individual temperature control built in as standard. And because we make both the controller and the air conditioner, it means that QUE will work hand in hand with our next generation ESP Platinum system for optimum performance.

Too many chefs spoil the broth.

To provide this type of control feature, most other air conditioning systems on the market require you to purchase and install an additional control add-on from a different company. And that's a big deal.

Installing an air conditioning system properly is hard enough without having to worry about whether all of its components will work properly with one another. And when it's a bolt on that has to work with a variety of different brands, the controls are not specifically designed to get the most out of each individual system.

And if it isn't performing, who do you call? Which company is responsible for fixing your problem?

Energy History

Schedule

Master Timer

Complete control at your fingertips.

QUE provides you with a level of control never before possible in home air conditioning.

Energy History

The Energy History feature allows you to easily monitor the historical energy usage of your system, making it easy for you to check on how your system has been performing. It features a clean, simple, and easy to understand design which clearly identifies whether your system is in cooling, heating, or standby mode. It even allows you to monitor the average temperature achieved versus the desired set temperature, just to make sure you're getting the comfort you want.

Schedule

QUE comes complete with a Scheduling function. Featuring an easy to use interface, it allows you to program the system to automatically run only when you want it to. You can easily select between your entire system, or just the individual zones you want to use, and there is an Overview screen that provides you with a quick glimpse of the week's schedule, ensuring you are able to easily monitor the scheduled activity.

Master Timer

If your comfort needs are simpler than those who use the Schedule function, the Master Timer is perfect for you.

Think of it as a simple countdown function. Once the countdown is complete, the whole system (or the specifically selected zones) then simply turn on or off.

For example, let's say everyone goes to sleep in your home at 9pm. You could set your Master Timer to turn the system off after two hours, press the button when you get into bed at 9pm, and fall asleep in absolute comfort. Two hours later, once the countdown is finished, the system will then turn off, saving you energy while you sleep.

And the beautiful thing is once you've set it up once, every time you want to use it from that point onwards only requires a simple touch of your Master Controller, making it fast and easy to control your comfort. For those who need to setup multiple timers, QUE allows you to program two, and if you are only controlling a single zone it can be setup and controlled with a QUE Zone controller. And best of all, with QUE Connect you can do all of this from your mobile device.

What's under the hood?

QUE is the only control system on the market with a dedicated Dashboard feature. Accessed via the QUE Touch Master Controller, the Dashboard has an easy to read interface which allows you to easily view the status of your air conditioning system. This has revolutionised the servicing of residential air conditioning systems. Traditionally, air conditioners can be quite difficult to service because large parts of the system are installed in the roof, or outside your home.

Unlike other systems, QUE's Dashboard feature provides easy access to information on the Master Controller, Zone Controllers, Indoor Unit and Outdoor Unit. It allows you, or your air conditioning contractor, to view information like fan speed, coil temperature, fan mode, temperature, gas pressure, compressor run/demand and event history. This means that servicing can be conducted quickly and easily, which will keep costs low and minimise intrusions on your time and your home.

Connect to comfort, wherever you are.

These days, great connectivity and easy access is as much a part of being comfortable as anything else. That's why the QUE control platform comes complete with a mobile app, QUE Connect.

With QUE Connect, you are able to control your system from anywhere – in your car, on the couch, at the office – all you need is an internet connected mobile device, and a Wi-Fi internet connection synched to your QUE system. QUE Connect's clean and intuitive design makes it extremely easy to use, and you can even control the individual temperatures in those areas that have individual temperature control.

QUE Connect is also a breeze to setup, simply requiring you to download the app, create an account, and enter the details into your QUE Touch Master Controller. You can even connect up to six air conditioners from a single account, which means you can control your office, home and holiday house from the one account.

And because it's important to us that we offer a solution for every lifestyle, we have also developed QUE Connect to be compatible with a range of leading products. That's why it's available on iPhone, iPad, and the latest Android smartphones from leading manufacturers.

QUE System – Features & Benefits

QUE Touch Master Controller	Benefit
High Resolution Colour Touch Screen	Clear and easy to use, the screen is on par with modern smart phones.
Inbuilt Wi-Fi and RF Technology	Wireless communication with the internet and between controllers is available without the need for an extra module.
Mimic Control	Allows an additional controller to mimic the master controller, providing flexibility and ease of use.
7 day Schedule	A fully programmable schedule allows you to program activity over the full 7 day week (e.g. turn the whole system or individual zones On/Off and program different modes etc).
Dual Master Timers for System and Zones	Allows you to quickly program your air conditioner, or specific zones to turn ON or OFF in a pre-set time, up to 24 hours.
Light and Proximity Sensor	The Light Sensor automatically adjusts the screen brightness depending on ambient light surrounding the controller, making it easier to read and less intrusive. The Proximity Sensor automatically wakes up a controller when a movement is detected in front of the controller, ensuring it's ready to go when you are.
Energy History	This feature has a clean, easy to read design that shows you the historical usage of your air conditioner.
Dual Set Temperatures	Allows you to set your air conditioner to operate within two set temperatures, maximising energy savings.
Quick All Zones Set Temperature Adjustment	Allows you to quickly change the Set Temperature of all of the Zones in one go.
Multiple Fan Speed Options	You can set your indoor fan speed to run at High, Medium or Low. For individual temperature controlled zones, Auto fan speed is also available.
Zone and System Naming	Allows you to easily personalise the name for each of your zones, and also assign a name for your whole air conditioning system.
Zone View	Provides a quick overview of the zones connected to the air conditioner, and allows you to quickly turn the zones ON or OFF.
Graphical Representation of Modes	Automatically loads different backgrounds depending on which Mode is selected, to visually communicate what Mode your system is in.
Quiet Mode	In Quiet Mode, the compressor speed is capped to limit outdoor unit noise.
Away Mode	Allows you to have a set back temperature while you're away, so when you get home the air conditioner doesn't need to work as hard to achieve the required ideal temperature.
Highly Configurable User Settings	A lot of advanced settings can be adjusted to optimise the system to your unique requirements, saving you energy and maximising comfort.
Child Key Lock with PIN code	Gives you the ability to limit access or prevent any unauthorised/accidental changes to the system's operational settings.
OTA (Over The Air) Software Updates Enabled	Allows the controller software to be updated wirelessly via the internet.
Self Learn Functionality with Integrated Zones	Your air conditioner actually self learns your zone and ducting configuration to deliver the designed airflow.
Inbuilt System Diagnostics	In the event of a fault the controller can diagnose and display the fault error on screen, making servicing a lot easier.

QUE Zone Controller	Benefit
Wireless Communication	Can connect to the Master Controller wirelessly via RF communication, allowing for an easier and faster install.
Graphical Display with Reversible Background	This clear and bright mono screen display also gives you the option of inverting the colour to suit your preference.
System and Zone ON/OFF	Allows you to turn the zone ON or OFF, or even the whole air conditioner, via the Zone Controller, saving you from having to walk to the Master Controller.
Mode and Fan Control of the System	Allows you to change the mode of operation and fan speed via the Zone Controller, saving you from having to walk to the Master Controller.
Dual Set Temperature	Allows you to set your air conditioner to operate within two set temperatures, maximising energy savings.
OTA (Over The Air) Software Updates Enabled	Allows you to update the controller software wirelessly via the internet.
Light Sensor	The Light Sensor automatically adjusts the screen brightness depending on ambient light surrounding the controller, making it easier to read and less intrusive.
Flexible Power Supply Options	Gives you the option of battery powered or wired power.

QUE Sense Remote Sensor	Benefit
Wireless Communication	Can connect to the Master Controller wirelessly via RF communication, allowing for an easier and faster install.
Dual Set Temperatures (via QUE Touch)	Allows you to set your air conditioner to operate within two set temperatures, maximising energy savings.
Flexible Power Supply Options	Gives you the option of battery powered or wired power.

QUE Connect Mobile App	Benefit
Control Multiple Air Conditioners	Allows you to access up to six air conditioners linked to a single user account.
Room and Set Temperature Display	Clean and easy to read design displays both the Indoor (Room) Temperature and Set Temperature, as displayed on the Master Controller.
Temperature and Humidity Display	Clean and easy to read design displays the Indoor (Room) Temperature, Indoor Room Humidity, and Outdoor Ambient Temperature.
Zone List View	Provides a quick overview of the zones connected to the air conditioner, and allows you to quickly turn the zones ON or OFF.
Quick All Zones Set Temperature Adjustment	Allows you to quickly change the Set Temperature of all of the Zones in one go.
Quiet and Away Modes	Allows you to enable or disable Quiet and Away Modes.
Away Mode Settings	Allows you to change the Away Mode settings.
Turn Schedule ON & OFF	Allows you to enable or disable Schedules that are set in the Master Controller.
System and Zone Naming	Allows you to easily assign or update the name for each of your zones, or even assign a name for your whole air conditioning system.
Dual Master Timers for System and Zones	Allows you to quickly program your air conditioner, or specific zones to turn ON or OFF in a pre-set time, up to 24 hours.

QUE System – Specifications

QUE Touch Master Controller	
Compatible with ActronAir Model	ESP Platinum QUE: CRQ2-14AS/ERQ2-14AS, CRQ3-17AS/ERQ3-17AS, CRQ4-19AS/ERQ4-19AS, CRQ2-16AT/ERQ2-16AS, CRQ3-18AT/ERQ3-18AS, CRQ5-21AT/ERQ5-21AS and CRQ5-24AT/ERQ5-24AS
Power Supply	12VDC ±5%
Screen Display	5.72" LCD capacitive touch screen
Wi-Fi Compatibility	802.11 b/g/n 2.4 Ghz
Temperature Sensor	Yes
Humidity Sensor	Yes
Proximity/Light Sensor	Yes
Operating Temperature	0°C to +50°C
Storage Temperature	-20°C to +55°C
Dimensions (mm)	154 x 122 x 22 (W x H x D)
Weight (grams)	290
Build	Aluminium/plastic/stainless steel
Colour	Black/silver or white/silver
Maximum Zones	8 zones

QUE Zone Controller	
Compatible with ActronAir Model	QTB-1000, QTW-1000
Power Supply	12VDC±5% or 4xAAA (Estimated 2 year battery life, based on standard testing)
Screen Display	2.7" graphic display
Operating Temperature	0°C to +50°C
Storage Temperature	-20°C to +55°C
Temperature Sensor	Yes
Light Sensor	Yes
Dimensions (mm)	85 x 106 x 19 (W x H x D)
Weight (grams)	110
Build	Aluminium/plastic/stainless steel
Colour	Black/silver or white/silver

QUE Sense Remote Sensor	
Compatible with ActronAir Model	QTB-1000, QTW-1000
Power Supply	12VDC±5% or 2xAAA (Estimated 2 year battery life, based on standard testing)
Operating Temperature	0°C to +50°C
Storage Temperature	-20°C to +55°C
Temperature Sensor	Yes
Dimensions (mm)	74 x 74 x 19 (W x H x D)
Weight (grams)	70
Build	Aluminium/plastic/stainless steel
Colour	Black/silver or white/silver

QUE Connect Mobile App	
Compatible with ActronAir Model	QTB-1000, QTW-1000
Platform	iOS and Android
OS Requirements	iOS 9 or later, Android 5.0 Lollipop or later
Mobile Device Resolution	iOS: Minimum of 1136 x 640 screen resolution Android: Minimum 1920 x 1080 screen resolution
Connection Requirements	Wi-Fi or mobile data with internet access

Control without compromise

Designed and built
in Australia

QUE Connect Mobile App
